Qualitative Comparison on ISIC 2018

	Input	Ground Truth	U-Net	Attention U-Net	UNet++	TransUNet	Paper-faithful Reconstruction	Restored MAFF-Net	Proposed MAFF-Net
(a) Diffuse, low contrast									
(b) Hair, stippled									
(c) Very faint margin									
(d) Adjacent structure									
(e) Dermoscope vignette									

Predictions are the segmentation masks saved during evaluation (experiments/<run>/samples/); input images and ground-truth masks are identical across all methods. No prediction was regenerated and no mask was edited.
Qualitative samples are drawn from the validation split (the only saved qualitative outputs); quantitative results in Tables I-III use the held-out test split.
